The who

Vasari - Luxury Italian surfaces perfected.

Vasari is born Italian, from the heart of the Emilia region, the latest technological advances in the production of large format porcelain surfaces have been fused with latest global trends and designs to create the ultimate large format surface.

In collaboration with ABKSTONE part of ABK Group, one of the world's leading producers of large format materials, Vasari has been created to revolutionise the experience and design capabilities for professionals and end users within the Australian kitchen & bathroom sector.

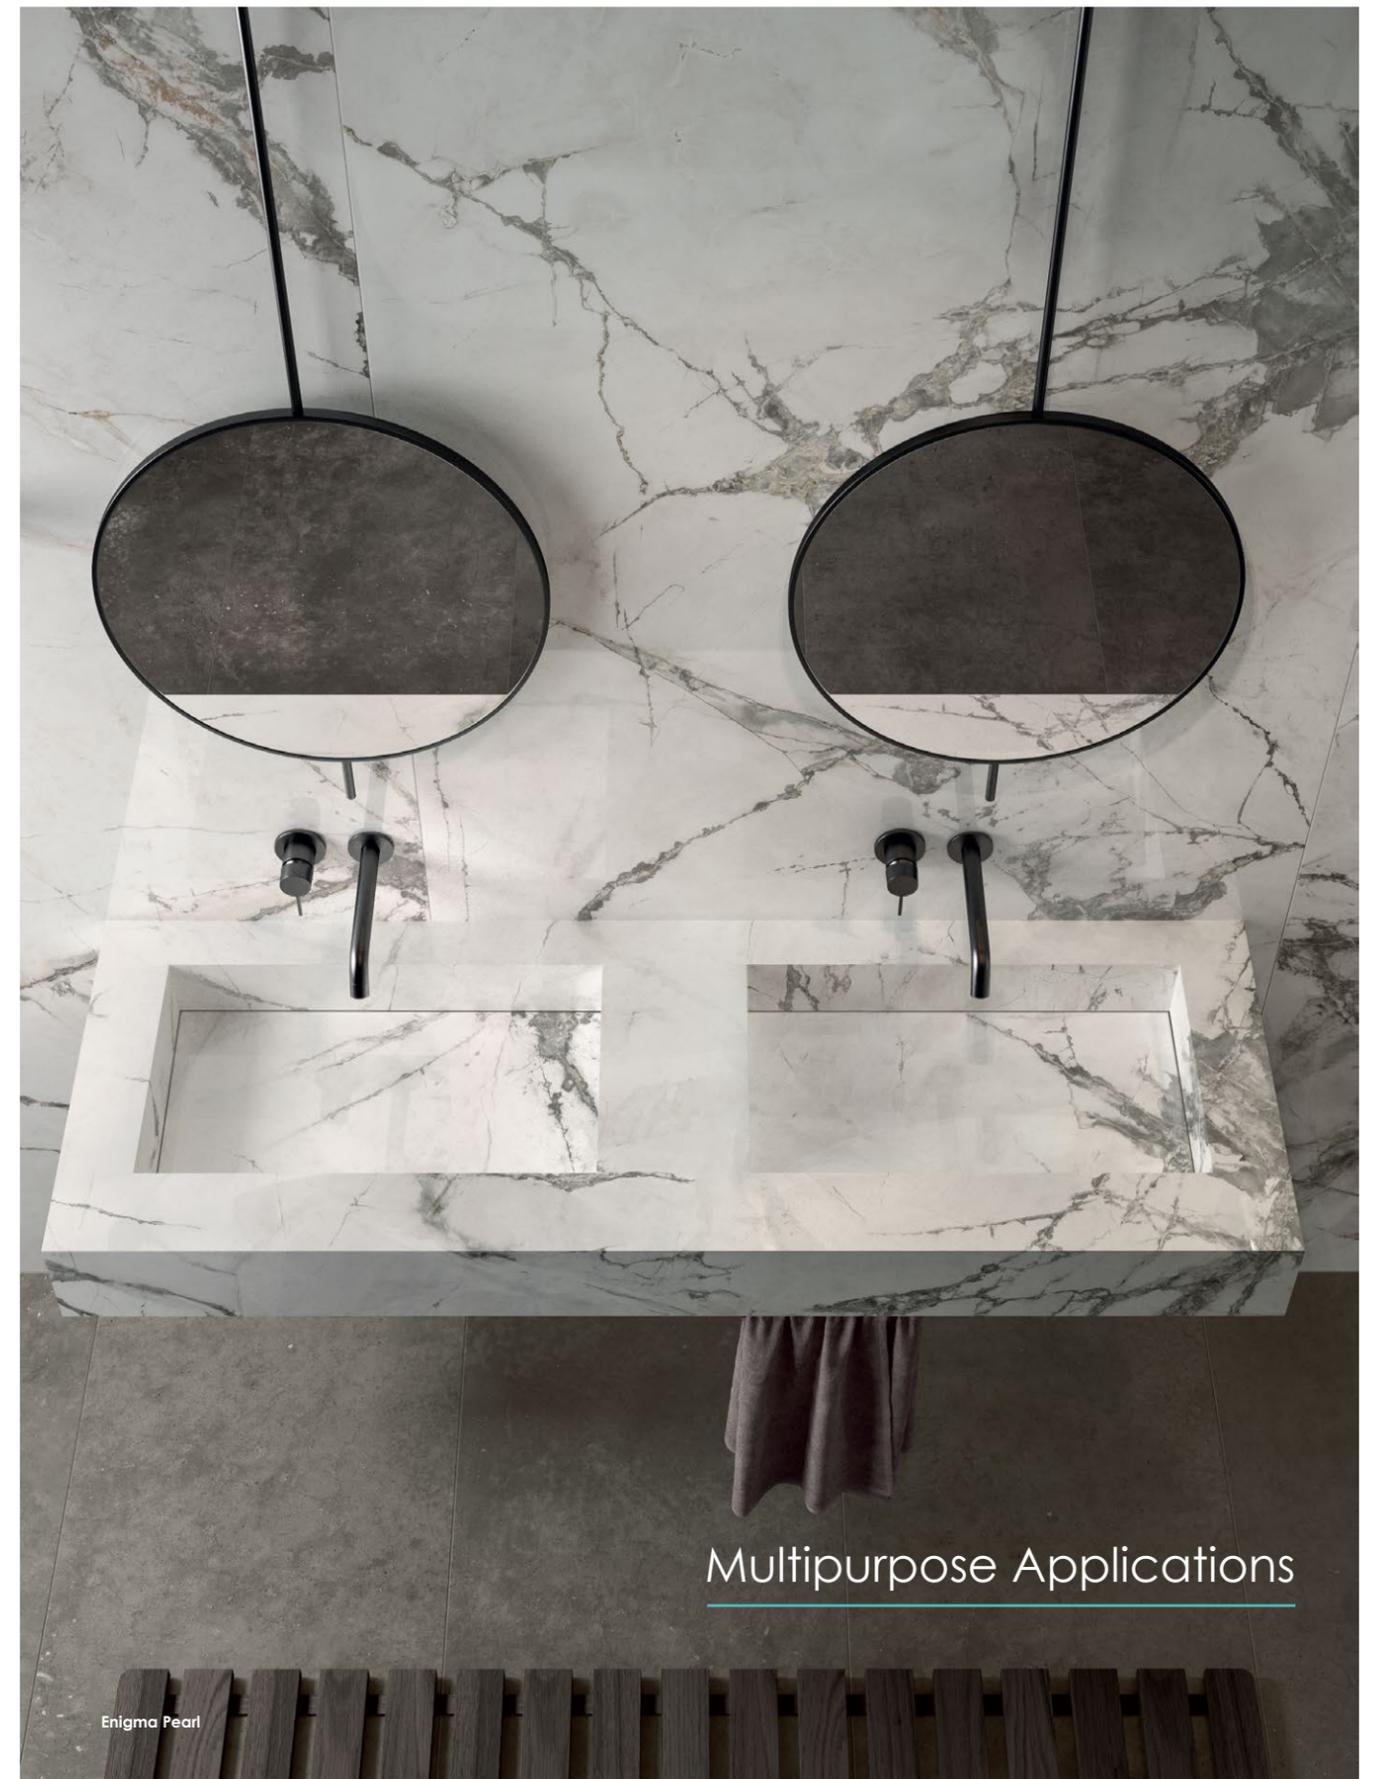

Vasari slabs are available in 6mm & 12mm thicknesses. 20 exquisite styles and designs to choose from, with two modern surface finishes

available in most colours. Vasari allows for ultimate creativity and design.

Vasari is produced from the highest-quality raw materials using the most advanced controlled dry compaction techniques and subsequently cured in the latest-generation ceramic kilns.

Vasari slabs are ideal for use on kitchen benches, splashbacks, bathroom walls and vanities thanks to their outstanding resistance to shock, scratching, heat and chemicals.

As a result, Vasari provides the perfect combination of style and practicality for the Australian kitchen and bathroom segment.

Multipurpose Applications

The what

Vasari Italian Surfaces are the end-result of a considerable investment program carried out over the years by ABKSTONE in the sector of large format surfaces. The material obtained constitute a technologically advanced product. Vasari is made with selected high-quality raw materials in one of the most advanced factories in the Italian ceramic sector.

The production plant based in Solignano Nuovo, utilizes more than 100 storage silos for mixing wet and dry materials, for this reason it is able to manage an infinite series of coloured mixtures. The aesthetics of the slabs are dramatically improved when compared to similar surfaces thanks to the perfect synergy between the body and the face of the slab. The production facility utilizes the latest generation 8-head digital machine, which is able to bring the graphic resolution of the product to the highest levels.

Ceppo Di Gre

The Facts

Thanks to the exclusive technologies implemented within the ABKSTONE production plant, it has become possible to create a large ceramic slab with controlled internal tensions, which allows for easy processing and a finished product that defies all rules.

The internal structure of each slab is checked using X-ray scanning machines (dynamic particle size control) before entering the kiln. This innovation makes it possible to guarantee the constant quality of the product by discarding any element of the material that may present anomalies.

The release of moisture from the material has been significantly improved and optimized thanks to the use of an exclusive 7 storey dryer, 47 meters long, which allows a steady and controlled drying process further enhancing the integrity of the material.

185 meters in length, and with an inlet of 1.95 meters, the kiln is one of the largest ever installed within a production plant. The sheer size of the kiln allows for more controlled temperature regulating during the curing process, further reducing internal tensions within the material.

Environment and sustainability are key focuses whilst creating Vasari. ABKSTONE are committed to the highest quality manufacturing techniques, whilst ensuring that all aspects of green manufacturing have been considered and managed.

The emissions from ABKSTONE's production plants remain consistently below the limits permitted by current regulations, whilst zero water is discharged into the environment.

All processing residues of glazes and raw materials are reused in the manufacturing cycle.

kitchen Benchtops

Vasari slabs display an astonishing ability to reproduce the elegance of marble, the natural look of stone and the contemporary character of concrete. They come in a multitude of polished and matte surfaces that are ideal for furnishing applications, especially kitchen and bathroom benchtops, or other solutions created by the imagination of architects or interior designers alike.

Depending on needs, the slabs can be selected from two different thicknesses 6 mm & 12 mm according to the type of application.

The beauty of Vasari large format slabs 1600 mm x 3200 mm is limitless, both in terms of size, the largest in the porcelain sector, and in terms of product durability, which lasts over time even when subjected to the most extreme conditions.

Bathroom wall coverings and benchtops

There is no better space in the home to showcase the luxurious nature and stunning designs that Vasari has to offer.

Vasari's advanced low porosity properties allow superb performance when used to create cascading wet areas or elegant vanity tops.

Vasari's large format offering allows for the creation of seamless walls of beauty that are perfect for the area in the home where hygiene is the utmost importance.

With textures and colours to suit any preference or design, Vasari is the ideal choice and a must for any bathroom space.

outdoor Applications

There is no better example to show the versatility of Vasari than when utilised for outdoor applications. The advanced technical characteristics and elegant designs present Vasari as the first choice for Al-Fresco dining areas.

Vasari boasts superior properties guaranteed to withstand even the harshest Australian weather conditions and climates.

Edges

Vasari slabs, thanks to the colour matching of the body and face, can be processed in different ways in order to obtain several edge finishes. These procedures are achieved through machines often used for glass and natural stone, they provide flawless results and infinite furnishing solutions for bathroom and kitchen spaces.

Comparative table

Porcelain slabs are a smart and safe choice for kitchen & bathroom surfaces. They have outstanding qualities and meet the most common parameters of durability and resistance used to evaluate materials in general.
